## **DETAILED ACTION**

1. Claims 10,13, and 16 have been cancelled.
2. Claims 1-2,4-5,7-8,12,15, and 18 have been amended.
3. Claims 1-9,12,15, and 18-19 are pending.

### ***Information Disclosure Statement***

4. The Information Disclosure Statement respectfully submitted on 10 November 2003 has been considered by the Examiner.

### ***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1-9,12,15, and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Wu et al. (Pub No. 2002/0120864).

As per claims 1,4, and 7, Wu et al. discloses a method, program, and apparatus for managing identification in a data communications network comprising receiving a portable user-controlled secure storage device (i.e., repository server system) which is used to store user data and provide user interface control to the user when a request is made to perform services within the Web. (See page 4, Section 0042), enrolling user of the user-controlled secure storage device with an authority network site, providing

information requested, storing the data, enabling the portable user-controlled secure storage device to release user data and using the user data, from the portable user-controlled secure storage device, at a service provider network site to obtain a service. (See page 4, Sections 0040-0042)

As per claims 2,5, and 8, Wu et al. discloses a method, program, and apparatus for managing identification in a data communications network comprising receiving a portable user-controlled secure storage device, enrolling user of the portable user-controlled secure storage device with authority network site, providing information requested, receiving the data in two portions, the first portion comprising a cryptogram computed based on the second portion (i.e. means for encryption by using a encrypted-key token which gives the user control to access a device on the Web (See page 3, Section 0027 and page 4, Section 0044), storing the user data in the portable user-controlled secure storage, enabling the portable user-controlled secure storage device to release user data, and using the user data, from the portable user-controlled secure storage, at a service provider network site to obtain a service. (See page 4, Sections 0044-0045)

As per claims 3,6, and 9, Wu et al. discloses a method, program, and apparatus for managing identification in a data communications network presenting an identity credential request and data to be stored to a federated identity server via a client host, receiving an identity credential in response to randomized ID and receiving a logon credential in response to the service request. (See pages 5-6, Section 0047 and Sections 0053-0054) Wu et al. further discloses an identity credential in response to

randomized ID by allowing the user to securely pass information such as authentication credentials to the service provider to authenticate the user, wherein the user-identity becomes validated (See page 3, Section 0027)

As per claims 12,15, and 18, Wu et al. discloses a method for protecting privacy on a data communications network, storing user logon information for at least one service provider server on a portable user-controlled secure device (i.e., repository server system) which is used to store user data and provide user interface control to the user when a request is made to perform services within the Web. (See page 4, Section 0042), the least one service provider server comprising at least one network server providing a service to a user, and logging on the device, and logging on providing access to the least one service provider server. (See pages 7-8, Sections 0065-0068)

***Claim Rejections - 35 USC § 102***

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

8. Claim 19 is rejected under 35 U.S.C. 102(b) as being anticipated by Ming-Chuan et al. (Encoded Bitmap Indexing for Data Warehouses)

As per claim 19, Ming-Chuan et al. discloses a memory for storing data for access by an application program being executed on a data processing system, comprising a data structure stored in the memory, the data structure including a bit-mapped in the field determined by whether the user is a member of a group associated

with the bit, the mapping for between bits in the field and membership in a group maintained by an aggregation authority. (See Abstract, page 220, and Section 2.1)

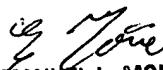

### **Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Courtney D. Fields whose telephone number is 571-272-3871. The examiner can normally be reached on Mon - Thurs. 6:00 - 4:00 pm; off every Friday.
